JOURNAL OF POWER SOURCES

Subject Index of Volume 61

Alkaline-earth metals
chemical stability between NiO/8YSZ cermet and alkaline-earth metal substituted lanthanum chromite, 219
Alkaline fuel cells
alkaline fuel cells: a critical view, 99
Anode
the reduction of nickel–zirconia cermet anodes and the effects on supported thin electrolytes, 189
Anodes
precious metal/hydrogen bronze anode catalysts for the oxidation of small organic molecules and impure hydrogen, 223

Carbon monoxide poisoning
carbon monoxide poisoning of platinum–graphite catalysts for polymer electrolyte fuel cells: comparison between platinum-supported on graphite and intercalated in graphite, 193
Catalysis
catalysis of the electrochemical processes on solid oxide fuel cell cathodes, 205
Catalysts
precious metal/hydrogen bronze anode catalysts for the oxidation of small organic molecules and impure hydrogen, 223
Cathodes
performance/structure correlation for composite SOFC cathodes, 173
catalysis of the electrochemical processes on solid oxide fuel cell cathodes, 205
an evaluation of a stabilized NiO cathode for the reduction of NiO dissolution in molten carbonate fuel cells, 239
Cell voltage
a model predicting transient responses of proton exchange membrane fuel cells, 183
Co-generation
fuel cell co-generation: the future of co-generation, 49
Commercialization
assessment of strategic approaches to the commercialization of fuel cells, 15
commercializing fuel cells: managing risks, 21
fuel cell commercialization issues for light-duty vehicle applications, 33
direct fuel cell power plants: the final steps to commercialization, 79
Compact reformer
hydrogen from methanol for fuel cells in mobile systems: development of a compact reformer, 143
Conductivity
some characteristics of Al_2O_3- and CaO-modified $LaFeO_3$-based cathode materials for solid oxide fuel cells, 161

Development
hydrogen generation from natural gas for the fuel cell systems of tomorrow, 113
critical issues and future prospects for molten carbonate fuel cells, 129
Direct-fuelled systems
direct-fuelled fuel cells, 91

Direct internal reforming
the effect of fuel cell operating conditions on DIR-MCFC system selection, 213
Dissolution
molten carbonate fuel cells: contribution to the study of cathode behaviour and oxygen reduction in molten Li_2CO_3–K_2CO_3 at 650 °C, 149
Distribution
fuel cells for distributed power generation, 87

Electrodes
alkaline fuel cells: a critical view, 99
Electroreduction
catalytic activity and stability of heat-treated iron phthalocyanines for the electroreduction of oxygen in polymer electrolyte fuel cells, 227
Emissions
fuel cells for transport: can the promise be fulfilled? Technical requirements and demands from customers, 61
Energy storage
sponge iron: economic, ecological, technical and process-specific aspects, 247
Environment
environmental analysis of solid oxide fuel cells, 259

Ferrites
some characteristics of Al_2O_3- and CaO-modified $LaFeO_3$-based cathode materials for solid oxide fuel cells, 161
Fuel cells
the changing nature of the power generation market — does it create opportunities for fuel cells?, 1
the new generation of vehicles: market opportunities for fuel cells, 7
assessment of strategic approaches to the commercialization of fuel cells, 15
commercializing fuel cells: managing risks, 21
fuel cell commercialization issues for light-duty vehicle applications, 33
fuel cell co-generation: the future of co-generation, 49
the market for utility-scale fuel cell plants, 53
fuel cells for transport: can the promise be fulfilled? Technical requirements and demands from customers, 61
direct fuel cell power plants: the final steps to commercialization, 79
fuel cells for distributed power generation, 87
direct-fuelled fuel cells, 91
hydrogen generation from natural gas for the fuel cell systems of tomorrow, 113
hydrogen from methanol for fuel cells in mobile systems: development of a compact reformer, 143
status of fuel cells R&D activities at Sanyo, 155
sponge iron: economic, ecological, technical and process-specific aspects, 247

Elsevier Science S.A.

Gas conditioning
sponge iron: economic, ecological, technical and process-specific aspects, 247
Germany
critical issues and future prospects for solid polymer fuel cells, 125
Graphite
carbon monoxide poisoning of platinum–graphite catalysts for polymer electrolyte fuel cells: comparison between platinum-supported on graphite and intercalated in graphite, 193

Heat losses
a model predicting transient responses of proton exchange membrane fuel cells, 183
Hydrogen
hydrogen from methanol for fuel cells in mobile systems: development of a compact reformer, 143
precious metal/hydrogen bronze anode catalysts for the oxidation of small organic molecules and impure hydrogen, 223
sponge iron: economic, ecological, technical and process-specific aspects, 247
Hydrogen generation
hydrogen generation from natural gas for the fuel cell systems of tomorrow, 113

Interconnectors
design and operation of interconnectors for solid oxide fuel cell stacks, 201
Iron
catalytic activity and stability of heat-treated iron phthalocyanines for the electroreduction of oxygen in polymer electrolyte fuel cells, 227
sponge iron: economic, ecological, technical and process-specific aspects, 247

Japan
phosphoric acid fuel cells in Japan, 73
status of fuel cells R&D activities at Sanyo, 155

Lanthanum chromite
chemical stability between NiO/8YSZ cermet and alkaline-earth metal substituted lanthanum chromite, 219
Lanthanum strontium manganite
performance/structure correlation for composite SOFC cathodes, 173
Light-duty vehicles
fuel cell commercialization issues for light-duty vehicle applications, 33
Lithiation
molten carbonate fuel cells: contribution to the study of cathode behaviour and oxygen reduction in molten Li_2CO_3–K_2CO_3 at 650 °C, 149

Managing risks
commercializing fuel cells: managing risks, 21
Market strategy
the market for utility-scale fuel cell plants, 53
Methanol
hydrogen from methanol for fuel cells in mobile systems: development of a compact reformer, 143
Microstructure
some characteristics of Al_2O_3- and CaO-modified $LaFeO_3$-based cathode materials for solid oxide fuel cells, 161
Mobile systems
hydrogen from methanol for fuel cells in mobile systems: development of a compact reformer, 143
Molten carbonate fuel cells
the market for utility-scale fuel cell plants, 53
critical issues and future prospects for molten carbonate fuel cells, 129
molten carbonate fuel cells: contribution to the study of cathode behaviour and oxygen reduction in molten Li_2CO_3–K_2CO_3 at 650 °C, 149
status of fuel cells R&D activities at Sanyo, 155
the effect of fuel cell operating conditions on DIR-MCFC system selection, 213
an evaluation of a stabilized NiO cathode for the reduction of NiO dissolution in molten carbonate fuel cells, 239

Natural gas
hydrogen generation from natural gas for the fuel cell systems of tomorrow, 113
Naval applications
testing of a De Nora polymer electrolyte fuel cell stack of 1 kW for naval applications, 255
Nickel
the reduction of nickel–zirconia cermet anodes and the effects on supported thin electrolytes, 189
Nickel oxide
molten carbonate fuel cells: contribution to the study of cathode behaviour and oxygen reduction in molten Li_2CO_3–K_2CO_3 at 650 °C, 149
chemical stability between NiO/8YSZ cermet and alkaline-earth metal substituted lanthanum chromite, 219
an evaluation of a stabilized NiO cathode for the reduction of NiO dissolution in molten carbonate fuel cells, 239

Operation
design and operation of interconnectors for solid oxide fuel cell stacks, 201
Oxidation
precious metal/hydrogen bronze anode catalysts for the oxidation of small organic molecules and impure hydrogen, 223
Oxygen
catalytic activity and stability of heat-treated iron phthalocyanines for the electroreduction of oxygen in polymer electrolyte fuel cells, 227
Oxygen systems
molten carbonate fuel cells: contribution to the study of cathode behaviour and oxygen reduction in molten Li_2CO_3–K_2CO_3 at 650 °C, 149

Performance
performance/structure correlation for composite SOFC cathodes, 173
Perovskites
some characteristics of Al_2O_3- and CaO-modified $LaFeO_3$-based cathode materials for solid oxide fuel cells, 161
Phosphoric acid fuel cells
the market for utility-scale fuel cell plants, 53
phosphoric acid fuel cells in Japan, 73
status of fuel cells R&D activities at Sanyo, 155
Phthalocyanines
catalytic activity and stability of heat-treated iron phthalocyanines for the electroreduction of oxygen in polymer electrolyte fuel cells, 227
Platinum
carbon monoxide poisoning of platinum–graphite catalysts for polymer electrolyte fuel cells: comparison between platinum-supported on graphite and intercalated in graphite, 193
Polymer electrolyte fuel cells
status of fuel cells R&D activities at Sanyo, 155
carbon monoxide poisoning of platinum–graphite catalysts for polymer electrolyte fuel cells: comparison between platinum-supported on graphite and intercalated in graphite, 193
catalytic activity and stability of heat-treated iron phthalocyanines for the electroreduction of oxygen in polymer electrolyte fuel cells, 227

testing of a De Nora polymer electrolyte fuel cell stack of 1 kW for naval applications, 255
Power generation
fuel cells for distributed power generation, 87
Power generation markets
the changing nature of the power generation market — does it create opportunities for fuel cells?, 1
Proton exchange membrane fuel cells
a model predicting transient responses of proton exchange membrane fuel cells, 183

Reduction
molten carbonate fuel cells: contribution to the study of cathode behaviour and oxygen reduction in molten Li_2CO_3–K_2CO_3 at 650 °C, 149
the reduction of nickel–zirconia cermet anodes and the effects on supported thin electrolytes, 189

Screen printing
the reduction of nickel–zirconia cermet anodes and the effects on supported thin electrolytes, 189
Small organic molecules
precious metal/hydrogen bronze anode catalysts for the oxidation of small organic molecules and impure hydrogen, 223
Solid oxide fuel cell
preparation and properties of small diameter tubular solid oxide fuel cells for rapid start-up, 167
the reduction of nickel–zirconia cermet anodes and the effects on supported thin electrolytes, 189
catalysis of the electrochemical processes on solid oxide fuel cell cathodes, 205
Solid oxide fuel cells
the market for utility-scale fuel cell plants, 53
progress in the planar CPn SOFC system design, 135
status of fuel cells R&D activities at Sanyo, 155
some characteristics of Al_2O_3- and CaO-modified $LaFeO_3$-based cathode materials for solid oxide fuel cells, 161
performance/structure correlation for composite SOFC cathodes, 173
design and operation of interconnectors for solid oxide fuel cell stacks, 201
environmental analysis of solid oxide fuel cells, 259
Solid polymer fuel cells
solid polymer fuel cells for transport and stationary applications, 105
critical issues and future prospects for solid polymer fuel cells, 125
Sponge iron
sponge iron: economic, ecological, technical and process-specific aspects, 247
Start-up properties
preparation and properties of small diameter tubular solid oxide fuel cells for rapid start-up, 167
Stationary applications
solid polymer fuel cells for transport and stationary applications, 105
Structure
performance/structure correlation for composite SOFC cathodes, 173
Supported electrolytes
the reduction of nickel–zirconia cermet anodes and the effects on supported thin electrolytes, 189
System design
progress in the planar CPn SOFC system design, 135

Transport applications
solid polymer fuel cells for transport and stationary applications, 105
Transport systems
fuel cells for transport: can the promise be fulfilled? Technical requirements and demands from customers, 61

USA
the new generation of vehicles: market opportunities for fuel cells, 7
commercializing fuel cells: managing risks, 21

Vehicles
the new generation of vehicles: market opportunities for fuel cells, 7

Yttria stabilised zirconia
performance/structure correlation for composite SOFC cathodes, 173
Yttria stabilized zirconium oxide
chemical stability between NiO/8YSZ cermet and alkaline-earth metal substituted lanthanum chromite, 219

Zirconia
the reduction of nickel–zirconia cermet anodes and the effects on supported thin electrolytes, 189
